Warehouse Management System

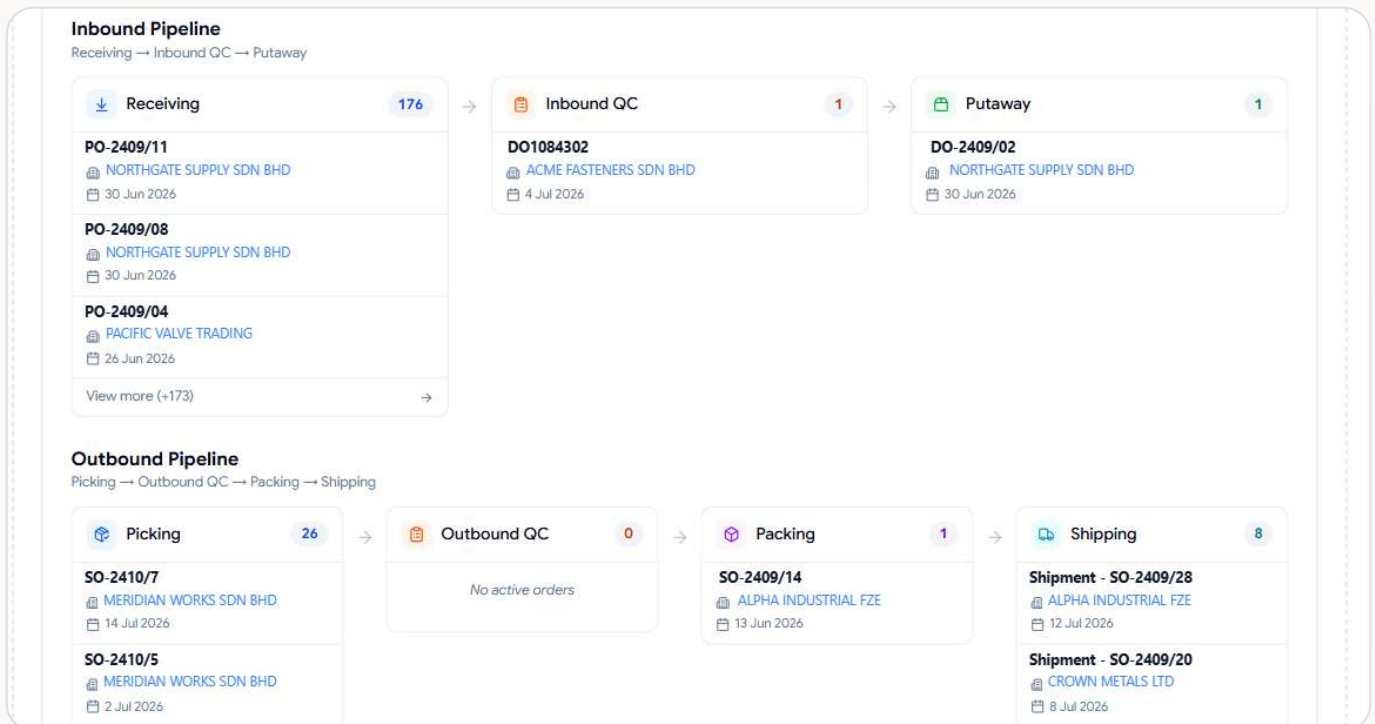

Built on MACHHUB

machhub.dev

WAREHOUSE

Every unit, where the system says it is.

A warehouse management system that runs the floor on scans, not paperwork. Receiving through putaway, picking through shipping, counts and work-order issuing, with your ERP kept in step on every movement.

Dashboard: both pipelines, stage by stage, with what is waiting at each

Inbound

A delivery order against the PO, items scanned into stock, QC on a sampling percentage you set, then putaway to a suggested bin.

Outbound

Pick lists generated from sales orders with stock reserved per line, picking guided unit by unit, then QC, packing and shipping.

Inventory

Stock held per bin, batch, serial and package. Stock in and out, bin transfers, pallet combine and breakdown, quarantine, aging and turnover.

Production

Work orders from the ERP, materials issued against the bill of materials, subcontractor jobs gate-passed out, finished goods put away on report.

Tell us how your warehouse runs.

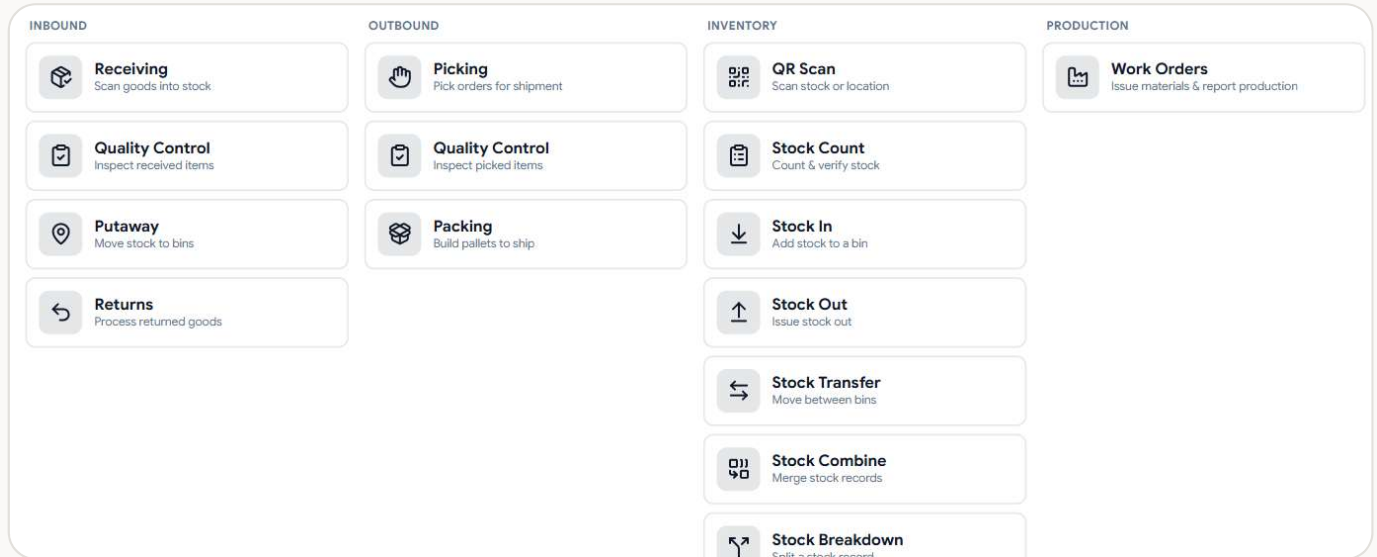

Every warehouse numbers its bins differently. Walk us through yours on a call, or have us on site, and we will scope it with you.

Talk to us

A tablet on the floor, a desk in the office.

Operator home: the tasks that person is allowed to do, nothing else

Scan Item

NEXT ITEM TO PICK

22-140088-A02

18L STEEL CYLINDER WITH VALVE PORT 1.5" 10UN-28

No unit reserved yet (backorder) — scan the unit you take.

Qty to pick **20**

Picking: the next unit, its bin and quantity. Scan to confirm

COUNTING WITHOUT STOPPING THE WAREHOUSE

Every scan in a count is its own event, so several operators count one area at once and the trail shows who counted what. A count discovers stock the system did not expect, and the variance posts to the ERP once it is approved.

EVERY UNIT HAS AN IDENTITY

Item, batch, serial and package together make the QR on the box, and that is what an operator scans. Split a pallet and the halves get their own labels. Stock is tracked per bin, so "where is it right now" always has an answer.

YOUR ERP STAYS THE SOURCE OF TRUTH

Purchase orders, sales orders, items and work orders come in from the ERP; receipts, adjustments, counts and production go back. A daily reconciliation re-pulls each entity, so a lost message is corrected without anyone retyping it.

WHO CAN DO WHAT, AND WHO DID IT

Operators, supervisors, admins, guards and office staff each see their own screens. The exceptions are granted separately: substituting a reserved unit, bypassing QC, approving a count. Every action lands in the audit trail.

HOW WE START

A consultation first, online or at the warehouse, then a scope built around your bins, your items and the ERP you already run. It goes live on one flow, and the rest follow once the floor trusts it.
